Your Answers:

1

0 / 1 point Multiple choice

What is the main reason to express sequential tags using the BIO (or also called IOB) format over only providing the class name?

- ☐ The IOB format can better expresses the boundaries of an entity or chunk
- ☐ The IOB format is easier to interpret for machines

×

☒ all of the above

Correct Answer:

The IOB format can better expresses the boundaries of an entity or chunk

- ☐ The IOB format is easier to read

2

1 / 1 point Multiple choice

What is the effect of metonymy for named entity classification?

☒ The same name is used for different types such as locations, people and governments

- ☐ Locations can be ambiguous because they have the same name
- ☐ Metonymy is not relevant for detection the type of entity
- ☐ Parts of entities are being referred to

3

1 / 1 point Multiple choice

Why is it important to create balanced evaluation data sets for NLP research?

☒ When an evaluation data set does not contain a realistic sample of the linguistic phenomenon, it doesn't allow one to measure a system's performance on that phenomenon adequately.

- ☐ Unbalanced evaluation data sets provide too little information for training a supervised NLP application.
- ☐ When an evaluation data set is not balanced, it is too small to measure the system performance
- ☐ When a dataset is not balanced it doesn't adequately reflect the linguistic phenomenon it purports to represent.

What can be considered a referring expression in Named Entity Recognition and Classification (NERC)?

- ☐ A communicative act to identify an entity
- ☐ Only proper nouns, such as person or organization names
- ☐ Only adjectives that describe entities

☒ Common noun phrases, pronouns, and in some cases, verbs, verb phrases, and

adjectives (e.g., for events and properties)

5

1 / 1 point Multiple choice

What is the key difference between Named Entity Recognition (NER) and Named Entity Classification (NEC)?

☒ NER involves identifying phrases that refer to named entities, while NEC assigns entity types such as person, location, or organization

- ☐ NER deals with proper nouns, while NEC focuses on common nouns
- ☐ NER assigns entity types such as person, location, or organization, while NEC involves identifying phrases that refer to named entities
- ☐ NER recognizes the context of an entity within a sentence, while NEC focuses on the structure of the entity itself

6

1 / 1 point Multiple choice

Which of the following features can be used in Named Entity Recognition and Classification (NERC)?

☒ All of the above

- ☐ Word-level features
- ☐ Lookup features
- ☐ Document & corpus features

7

1 / 1 point Multiple choice

Which of the following is an example of ambiguity in Named Entity Recognition (NER)?

☒ "Apple" referring to the organization vs. "apple" as a fruit

- ☐ "Paris" as a location vs. "Paris" as a person
- ☐ "New York, "NY", and "The Big Apple" referring to the same location

☐ "Holland" and "The Netherlands" used as metonyms for the same country

8

1 / 1 point Multiple choice

The representation 'xxxXx' for the word 'spaCy' is an example of which of the following features?

☒ Word shape feature

☐ Digit pattern

☐ Character n-gram feature

☐ Case feature
