

[L7] Digital Culture & The Digital Divide

Sunday, May 17, 2020 12:44 PM

Digital Culture

- **Culture** = The set of values, habits, practices, attitudes of a group of people
- Being part of a culture means that you behave in a certain fashion
- A lot is done in a digital way, but a lot of it (playing games, studying, etc) have their roots far before the digital age
- Culture has changed. Some of the changes are due to the prevalence of technology. In that sense, culture has become intertwined with the digital world
- Most people have online accounts, which take up certain parts of our lives

How has Digital Culture changed the way we perceive the world?

- Education:
 - o E-learning in the form of electronic learning environments have changed habits
 - o E-learning is also partially a buzzword. Most changes are not very in-depth
- Change happens in 2 ways:
 - o Appropriation
 - Taking a new technology and making it do what you want
 - o Civilization
 - Learning to make use of a technology that already exists
- Push & Pull:
 - o Push = creating something new and putting it on the market if there is a desire for it
 - o Pull = listening to a desire from the market and creating a product to satisfy it
- Technology changes us by enforcing trends and tendencies within society
- Culture has melded with the digital world, but they are so intertwined that calling modern day culture digital is not accurate in every sense
- Words like "community" shifted meaning, because being in the same geographic location was no longer necessary
- There are 3 ways of describing the 21st century society:
 - o Information society
 - o Knowledge society
 - o Risk society
